

**Først testes parkerings bremsen og derefter køres de elektriske bremses tilbage i bag med tester, efter monteringen skal bremsene grundstilles og så er bilen klar til igen at køre mange år med originale bremses.**

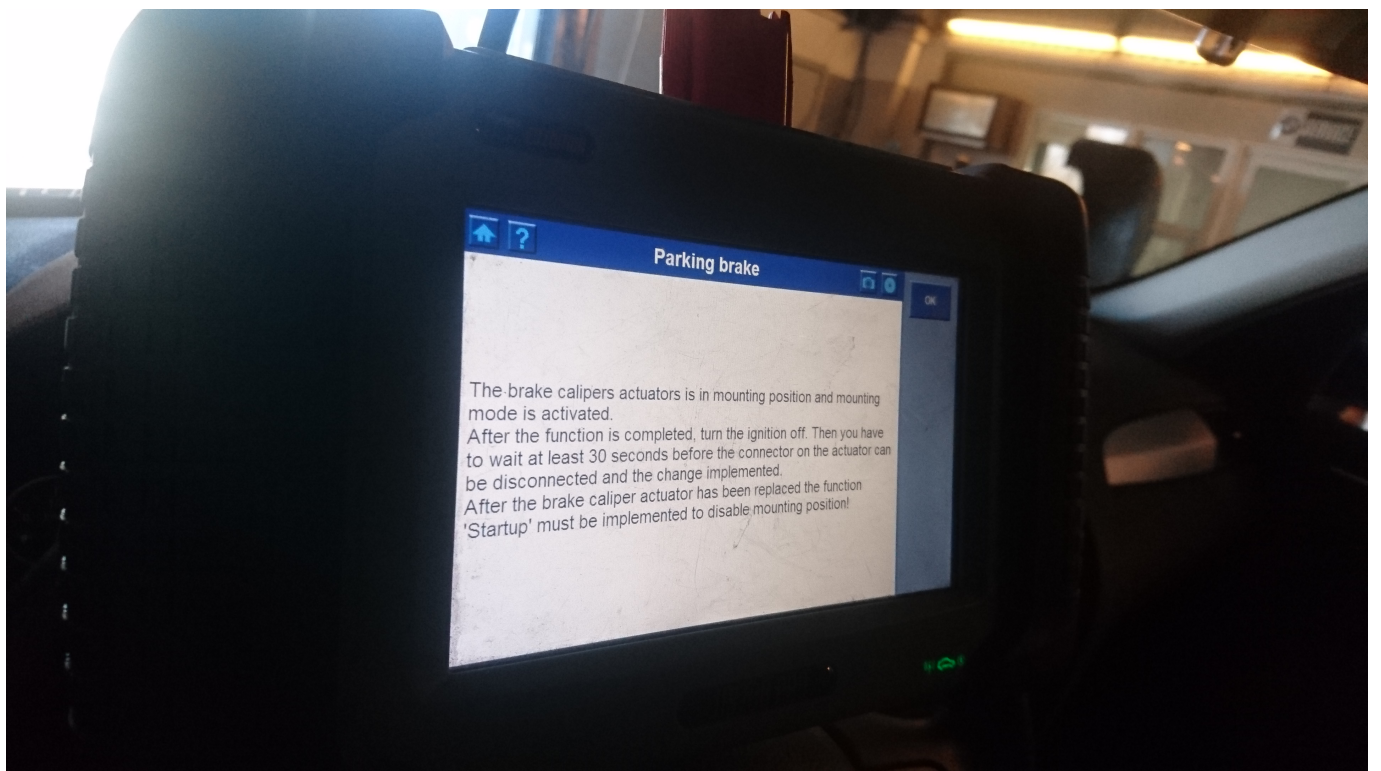

**Parking brake**

The brake calipers actuators is in mounting position and mounting mode is activated.

After the function is completed, turn the ignition off. Then you have to wait at least 30 seconds before the connector on the actuator can be disconnected and the change implemented.

After the brake caliper actuator has been replaced the function 'Startup' must be implemented to disable mounting position!
